

Pre-Engineered Metal Building Steeple Receiving Ring

To insure the best installation of our steeples, we recommend using our *Pre-Engineered Metal Building Receiving Ring*. This ring is an exact match to the steeple anchor system including bolt holes. The receiving ring is shipped prior to the steeple arrival and is to be installed by the building contractor. It is to be attached to the roof support structure.

Advantages of the Receiving Ring

- Faster Installation.
- Interior ceiling may be installed before steeple install.
- Better weight distribution.
- Engineer can design into building structure.
- Transfers steeple weight directly to roof support structure.
- All steeple installation work completed on exterior of roof.
- Normal wind loading of steeple does not damage roof material.

Receiving Ring **Required** for factory installation on the following models:

- All Custom Models
- Architectural Series
- Premier Series
- Beacon Series
- Recommended for all others
